

Naiki Website - AI Optimized Summarized PRD

Vision

Create a premium editorial-style NGO website that inspires trust, increases donations, volunteer participation and partnerships while reflecting Naiki's mission.

Mission

Breaking barriers with education & outreach. Empowering youth with voice, leadership & skills.

Design Direction

Editorial minimalism inspired by the supplied reference website. Clean, immersive, trustworthy and storytelling-driven.

Core Sections

Hero, About, Programs, Impact, Testimonials, Gallery, Get Involved, Donate, Team, Contact and Footer.

Technical Stack

Next.js, TypeScript, Tailwind CSS, Framer Motion, GSAP, Lenis, CMS-ready architecture, SEO and WCAG AA accessibility.

Critical Visual Design Language (Highest Priority)

Primary Rule

The supplied reference video is the primary source of truth for layout philosophy, composition, spacing, typography and motion. Do not generate a generic NGO website.

Floating Editorial Canvas

The entire experience should live inside a large floating rounded card centered on a warm off-white background. Recommended width 88–92% of viewport, max-width 1600px, 28–36px border radius, subtle shadow and generous margins.

Grid & Composition

Use a 12-column Swiss grid with large whitespace. Every section should feel art-directed rather than template-based. Alternate asymmetric layouts, varied card compositions and editorial image placement.

Card System

Rounded editorial cards (28–32px radius), 32–48px padding, soft shadows, subtle borders and smooth hover lift.

Typography

Large bold editorial headlines dominate the layout. Typography should become a visual element with generous whitespace.

Navigation

Minimal sticky navigation inside the floating canvas with an emphasized Donate button.

Motion

Premium scroll animations only: fades, reveals, staggered entrances, parallax where appropriate

and smooth scrolling. Avoid flashy animations.

Photography

Use authentic documentary-style imagery showing real students, volunteers, classrooms and community outreach. Avoid corporate stock photography.

Overall Goal

Visitors should feel they are experiencing an Awwwards-quality editorial website that builds trust, credibility and emotional connection rather than a traditional NGO landing page.

Performance Goals

Lighthouse 95+, semantic HTML, optimized images, lazy loading, responsive design and excellent accessibility.

AI Development Guidance

Treat the visual design language as a mandatory specification. Prioritize storytelling, modular reusable components, premium motion, accessibility and maintainability.
